

GitHub Pages[Pages Help](#)

Websites for you and your projects.

Hosted directly from your [GitHub repository](#). Just edit, push, and your changes are live.

What is GitHub Pages?

What is GitHub Pages?

Ready to get started? Build your own site from scratch or generate one for your project.

You get one site per GitHub account and organization, and unlimited project sites. Let's get started.

User or organization site

Project site

Use a theme, or start from scratch?

You have the option to start with one of the pre-built themes, or to create a site from scratch.

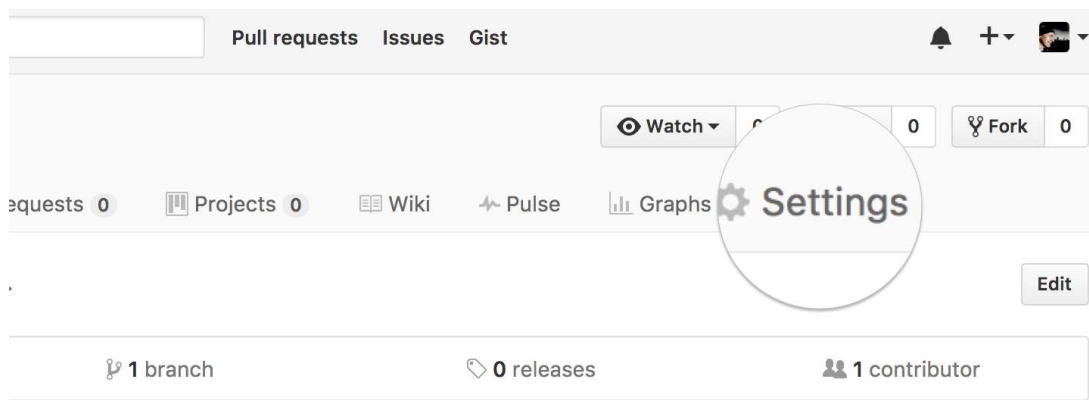

[Choose a theme](#)[Start from scratch](#)

1

Repository Settings

Head over to [GitHub.com](https://github.com) and create a new repository, or go to an existing one.

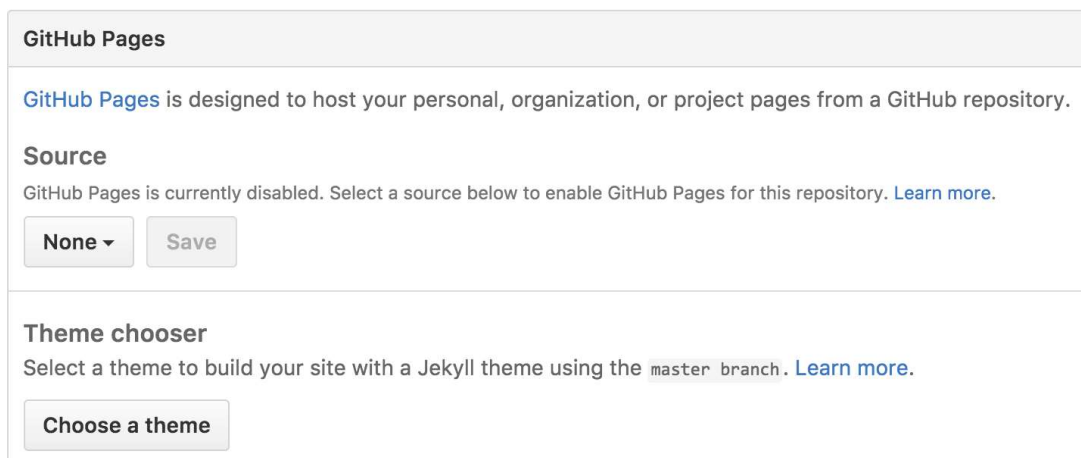

Click on the Settings tab.

2

Theme chooser

Scroll down to the **GitHub Pages** section. Press **Choose a theme**.

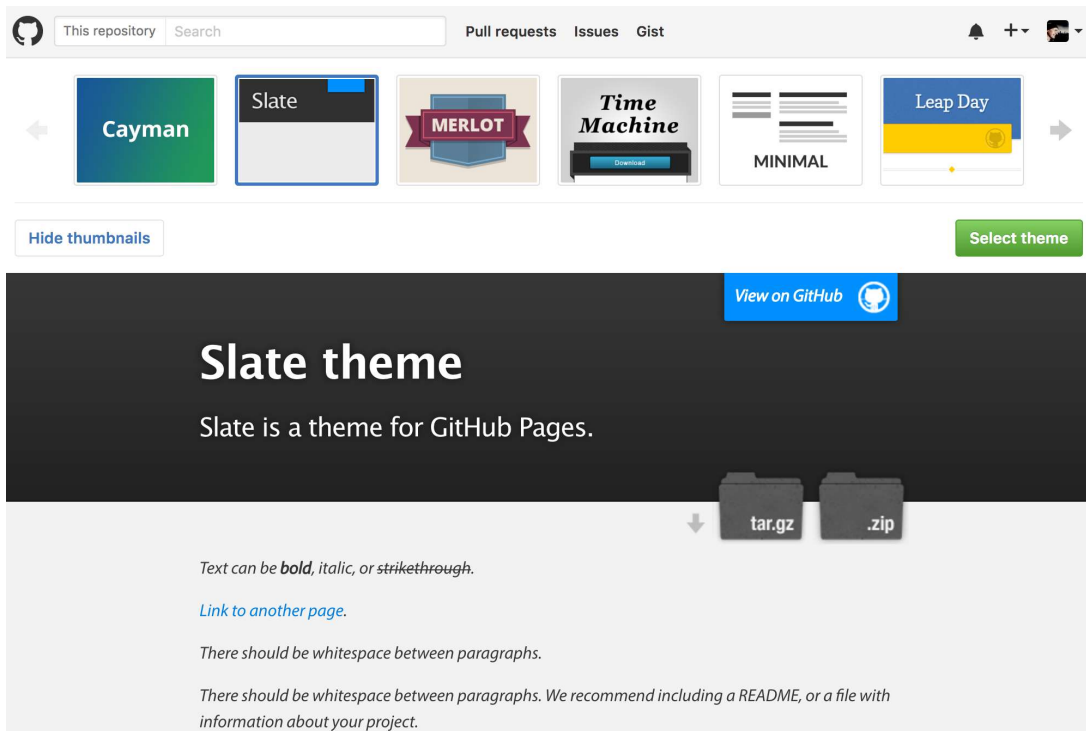

3

Pick a theme

Choose one of the themes from the carousel at the top.

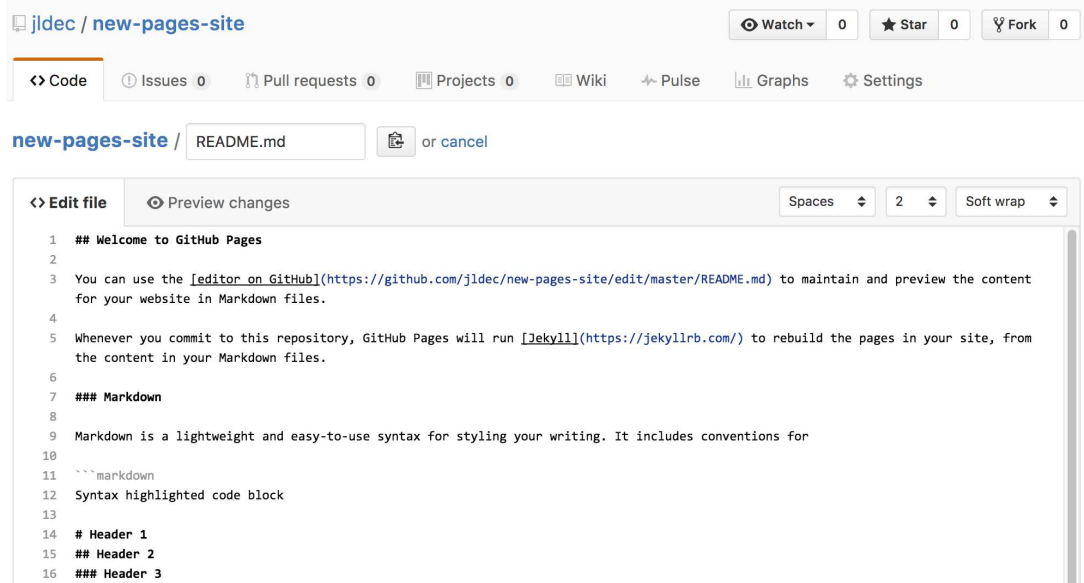

When you're done, click **Select theme** on the right.

4

Edit content

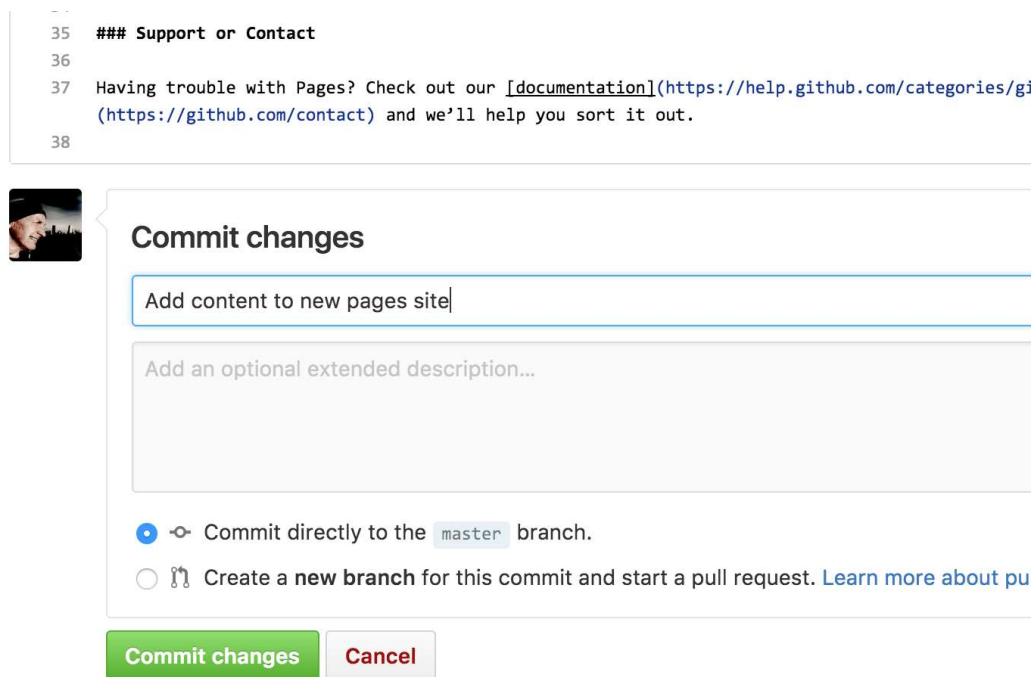

Use the editor to add content to your site.

5

Commit

Enter a commit comment and click on **Commit changes** below the editor.

6

...and you're done!

Fire up a browser and go to **`http://username.github.io/repository`**.

Now that you're up and running, here are a few things you should know.

Blogging with Jekyll

Using [Jekyll](#), you can blog using beautiful Markdown syntax, and without having to deal with any databases.
